CEYLONRY POS · PRODUCT DOCUMENTATION

Ceylo, the setup checker

Ceylo is a small assistant inside the POS. It reads the business's configuration, checks it against what the business needs to trade, and says plainly what is in order and what still needs attention.

Status **Concept · documentation only**

Owner Ceylonry product team

Version 0.1 · 19 Oct 2026

SUMMARY

What Ceylo does

Owners and managers set up the POS once and then rarely look at the settings again. Problems show up later, at the counter: a receipt that does not print, a kitchen screen that is not paired, a fifth cashier the plan does not allow. Ceylo runs a short health check on request (and quietly after a settings change), groups the results, and links each problem to the exact screen that fixes it.

WHO USES IT

Owners and managers

Cashiers see a read-only "ask a manager" summary.

WHAT IT READS

This business's settings

Business profile, POS setup, printers, KDS, locations, users, plan and sync.

WHAT IT CHANGES

Nothing on its own

Every fix opens the right settings screen; the person makes the change.

CHARACTER

Meet Ceylo

Ceylo's head uses the POS sidebar colour, its visor eyes use the Ceylonry orange, and its antenna is a tea leaf, a nod to Ceylon. The eyes carry its mood, so the same drawing works at 24 px on a button and at full size in the empty state.

Ready

Idle, button and panel header

Checking

While the checks run

All in order

Every check passed

Needs attention

Warnings or problems found

How Ceylo talks

- Short, plain sentences: "Your receipt printer is not set."
- Says what will go wrong at the counter, then how to fix it.
- Names screens the way the POS does: Settings › Receipt Printing.
- Celebrates briefly when everything passes, then gets out of the way.

What Ceylo avoids

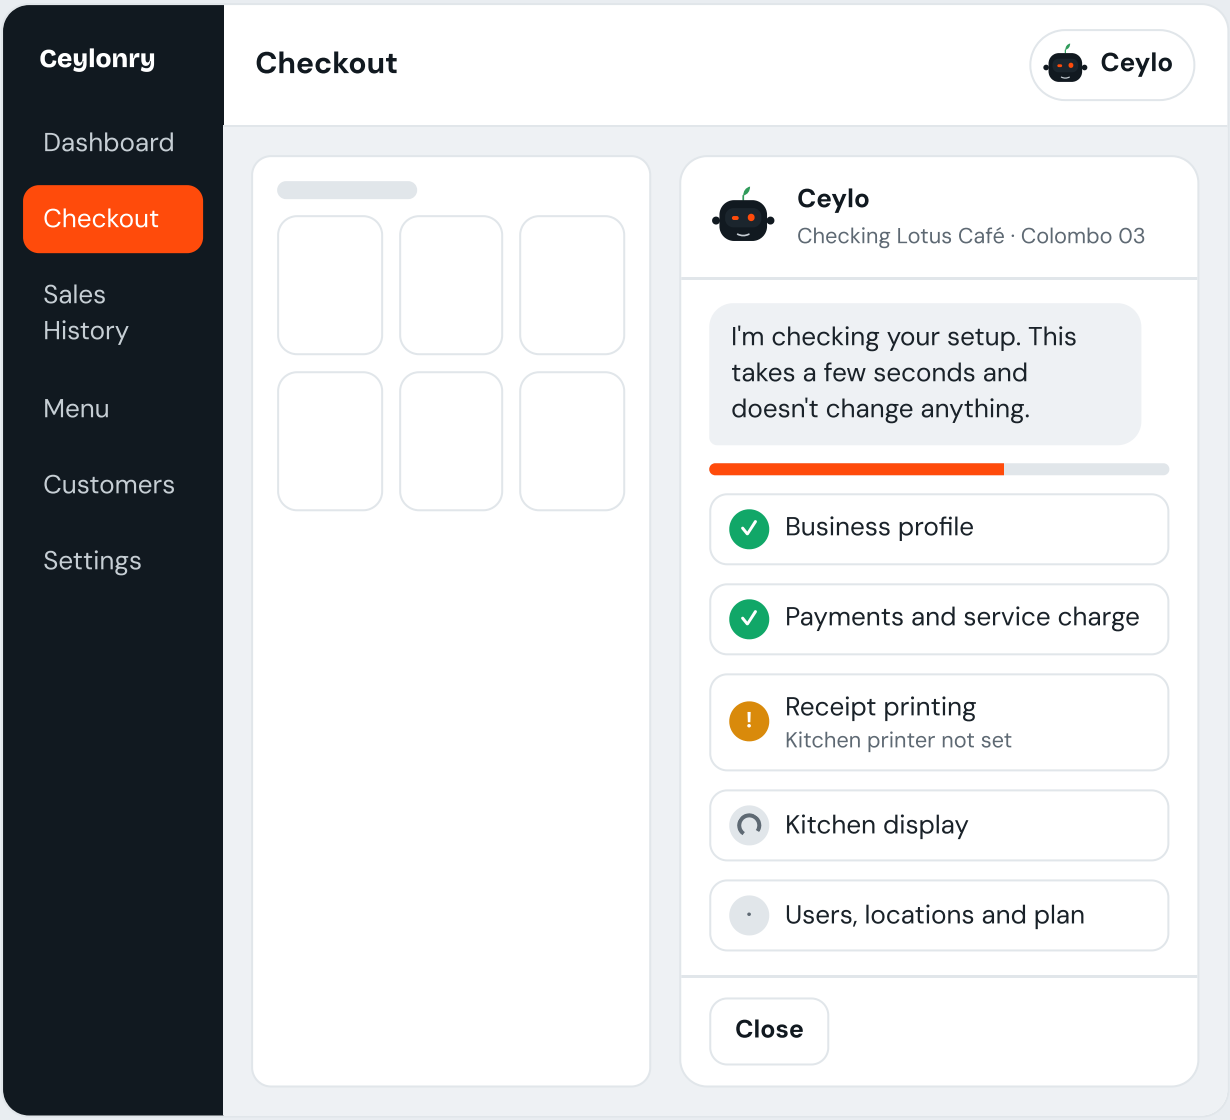

- Technical terms such as stamps, documents, payloads or JWT.
- Blame ("you forgot…") and alarm for small issues.
- Guessing: if it cannot check something offline, it says so.
- Showing secrets, keys, PINs or customer details.

MOCKUP 1 · DESKTOP

Where Ceylo lives

A small Ceylo button sits in the top bar next to the sync icon. It opens a side panel over the current screen, so the check can run from anywhere without leaving a sale. The same check is available under Settings › Plan & Support as "Check my setup".

Checkout with the Ceylo panel open, check in progress Mockup, not final UI

MOCKUP 2 · REPORT

The setup report

When the check finishes, Ceylo shows one report. Problems come first, then warnings, then what passed (collapsed). Each line says what will happen at the counter and has one button that opens the screen that fixes it.

Report with one problem and two warnings Mockup, not final UI

3 things need your attention

Checked 22 settings · today 09:41 · Lotus Café, all locations

1 problem | 2 warnings | 19 passed

Problems stop something from working

Kitchen display is not paired Open KDS ›

Kitchen orders from Checkout will not reach the kitchen screen. Pair the kitchen device with a code.

Warnings work, but may cause trouble

Kitchen printer name is empty Receipt Printing ›

KOT tickets will print on the receipt printer instead of the kitchen.

9 of 10 users on your Business plan Users ›

You can add one more active user. Deactivate old staff or ask Ceylonry about a larger plan.

Passed 19 checks · show

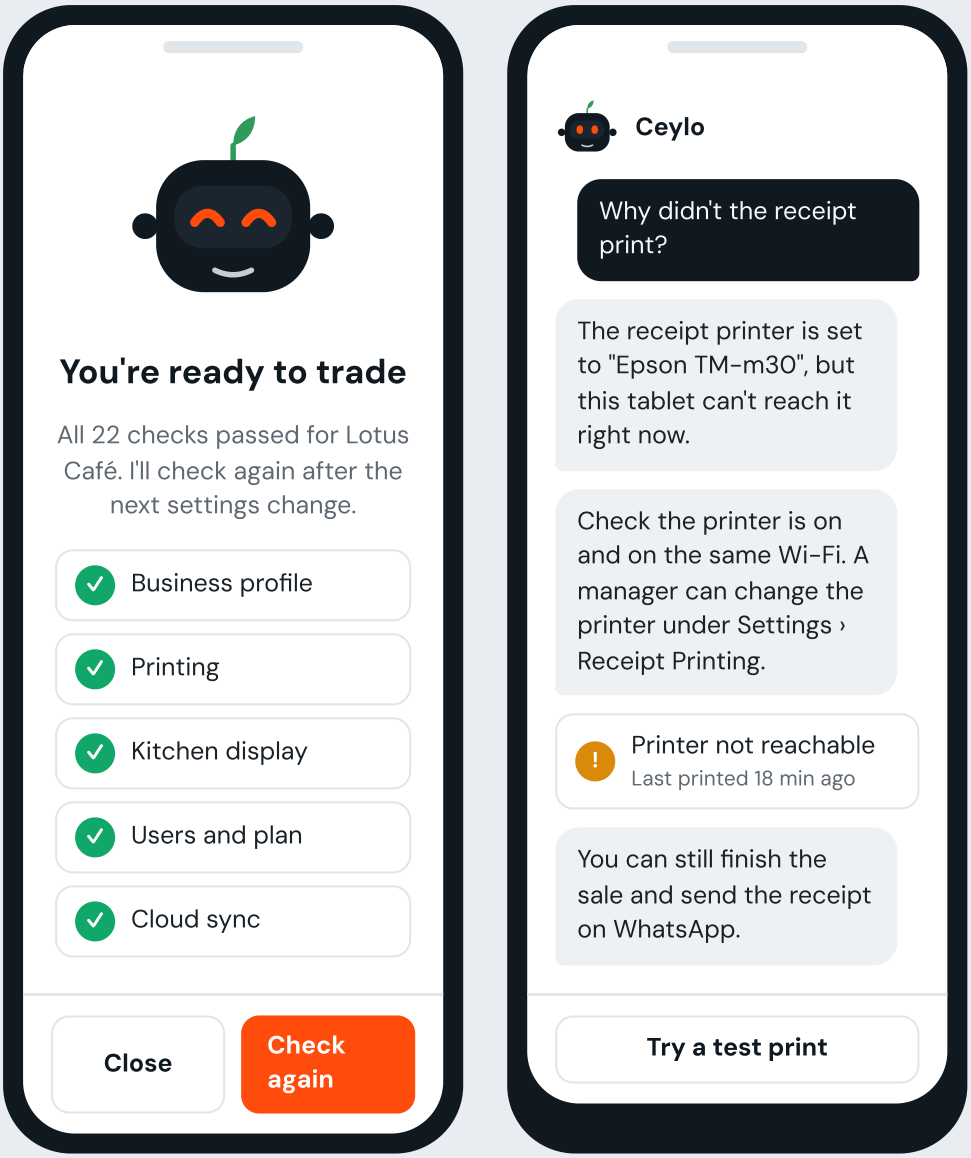

MOCKUP 3 · PHONE

On a phone or tablet

On narrow screens Ceylo opens full screen. The first view is the answer, not the list: a single line that says whether the business is ready to trade, with the details one tap below.

Left: everything in order · Right: a cashier asking

Mockup, not final UI

CHECKS

What Ceylo checks

Each check reads settings the POS already stores. A **Problem** stops something from working; a **Warning** works today but is likely to cause trouble. Checks that do not apply (for example KDS for a retail shop) are skipped and not counted.

AREA	CHECK	RESULT WHEN IT FAILS	FIX OPENS
Business profile	Business name, address and email are filled in; a logo is set	Problem name missing (receipts and invoices show blank) Warning address, email or logo missing	Settings › Business Profile
POS setup	Business / POS type is chosen; service charge is between 0 and 100 %; at least one payment method is on	Problem no payment method Warning service charge set but 0 %	Settings › POS Setup
Menu	Products exist, each has a price above zero and a category; images are not oversized	Problem no products Warning products at LKR 0 or uncategorised	Menu
Receipt printing	A receipt printer is set (and the Epson address when Epson is used); a kitchen printer name is set for kitchen businesses; a receipt footer exists	Warning no printer, or no kitchen printer for a restaurant	Settings › Receipt Printing
Kitchen display	Only when the KDS feature is on: at least one kitchen device is paired and seen recently	Problem KDS on but nothing paired Warning paired device not seen for 24 h	Settings › KDS
Operations	Kitchen and display devices have "Always live screen" on; feedback link and delay are valid when used	Warning kitchen device on the slower idle refresh	Settings › Operations

AREA	CHECK	RESULT WHEN IT FAILS	FIX OPENS
Locations	Every active location has a name and code; each user's locations still exist	Warning user linked to a removed location	Locations
Users and roles	At least one owner or manager can approve refunds and voids; every user has a PIN	Problem no approver (cashiers cannot refund) Warning shared or default PIN such as 1234	Users
Plan limits	Active users and locations are within the plan assigned in the admin portal; no feature in use is outside the plan	Problem over the limit Warning one away from the limit	Settings › Plan & Support
Subscription	Trial or paid period has not ended; next payment due date is not within 5 days	Problem expired Warning due within 5 days	Settings › Plan & Support
Cloud sync	The device is online, the last sync succeeded, and nothing has waited to upload for more than 10 minutes	Problem sync failing Warning offline, with changes waiting	Sync icon (retry)
Images	Saved images have moved to cloud storage (not embedded in the business data)	Warning images still embedded (slower sync)	Settings › Image storage

FLOW

How a check runs

1
Start
Someone taps Ceylo or "Check my setup", or a settings save triggers a quiet re-check.

2
Read
Ceylo reads the settings already on the device. No extra download, so it works offline.

3
Check
Each check returns pass, warning, problem or skipped, with one sentence of reason.

4
Report
Problems first, then warnings. Passed checks are folded away.

5
Fix
The fix button opens the right screen. Ceylo re-checks that item when the person comes back.

After a quiet re-check Ceylo only speaks up if a new problem appears: the button gets an orange dot and a one-line notice. It never interrupts a sale in progress.

RULES

Ground rules

Read-only
Ceylo never changes a setting, sends a message or deletes anything. People make every change themselves.

Respects roles
Owners and managers see the full report. Cashiers see whether the till is ready and "ask a manager" for anything else.

No secrets
PINs, payment details, keys and customer data are never shown. A weak PIN is reported as "a user has a weak PIN", not the PIN itself.

Honest about limits
If a check needs the internet (sync, subscription) and the device is offline, Ceylo marks it "not checked" instead of guessing.

Light on the device
Checks run on data already loaded, in well under a second. Quiet re-checks wait until the screen is idle.

Accessible
Every status uses an icon and words as well as colour. The panel works with a keyboard and a screen reader, and buttons are at least 44 px on touch screens.

SCOPE

Not in the first version

- Free-text questions answered by AI. The first version answers from the check results only; the cashier "why didn't it print" chat above is scripted from those results.
- Fixing settings on the person's behalf.
- A cross-account view in the admin portal. Later, the same checks could feed a "setup health" column on the accounts list.
- Checks on the CashFlow app or Guest Manager.

Open questions

- Should the quiet re-check also run once a day, or only after settings changes?
- Is "5 days before payment due" the right warning window?
- Should owners be able to mute a warning they accept (for example "no logo")?
